

1. A company stores the details of employees such as employee id, basic pay, % of DA and HRA. Write an algorithm and a C ++ code to

- i. Get the details of the employee.

- ii. Display the Employee id and Total salary.

Total salary = Basic Pay + % of DA * basic pay + HRA.

Input Format

Employee id of employee

Basic pay of employee

Percentage of DA of employee

HRA of employee

Output Format

Employee id of employee

Total salary of employee
